KELLEY THOMPSON

OBJECTIVE

WEB DESIGNER/FRONT-END DEVELOPER

I enjoy designing web sites that look great and function well! I am looking for a full-time position with a company of great people and a fun team where I can contribute by using my skills to create and implement new ideas, solve day-to-day web site issues and be challenged to develop new skills.

PROFESSIONAL EXPERIENCE

Vantiv, LLC, Dallas, Texas (working remotely from Omaha, Nebraska)

2010 to Present

Web Designer

I provide web design services and graphics for various internal and external clients on multiple web sites.

- ▶▶ **vip.vantiv.com** (formerly www.tnbcad.com), a password secured client portal site. After the merger of Vantiv and TNB Card Services I updated the site to display our new corporate branding.
- ▶▶ **www.gotomycard.com** is a tool used by our financial institution clients to give their customers the ability to manage their credit card accounts. Credit union clients can have their portion of this web site customized with their corporate branding; my responsibility is to create style sheets for both mobile and desktop that add the client's brand elements to the layout so that each client's customer experiences the branding for that particular financial institution. This site will soon be responsive using Bootstrap framework.
- ▶▶ **www.designitphotocard.com**, a site that gives clients the ability to upload their own photos in order to customize their credit card plastic.

Skills Required: HTML, CSS, Dreamweaver, Flash, Photoshop, Illustrator, Javascript, JQuery, classic ASP, ASP .Net using Visual Studio, web page design and layout.

Town North Bank, Dallas, Texas

2008 to 2010

Web Designer

- ▶▶ **www.tnbonline.com** - Town North Bank had purchased a web site design from a third-party; I was hired as the bank's first official web designer in order to implement the new design, which included content regrouping and organization. As part of this effort, I also optimized all graphics used in the site. After the web site was taken to .Net, I learned how to use master pages for layout, and .Net controls for repeating navigation elements.
- ▶▶ **www.townnorthbank.com** - Company seniors referred to this as the 'corporate web site'. I updated navigation and other data as requested from the business and created a new Flash banner to replace an outdated one. The site's layout, created by a third party, was already decent; I added a few more features such as Google maps for location and updated the contact form with Javascript validation. This site was eventually consolidated with www.tnbonline.com.

SKILLS

Primary:

HTML
CSS
Dreamweaver
Flash
Photoshop
Illustrator
Javascript
JQuery
Responsive design
Web site design
Web page layout

Secondary:

PERL

KELLEY
THOMPSON

PROFESSIONAL EXPERIENCE *(continued)*

▶ **www.tnbcad.com** – This was the TNB Card Services division secured web site for registered clients to get access to the latest marketing promotions and materials. I spent a large portion of my time implementing marketing campaigns (graphics and layout) and creating web forms with Javascript validation for email submission. I updated the site's underlying code structure and layout from its older table-based design to a modern div/CSS layout; in a later change I updated the site navigation, adding drop-down sub-menus and fly-out elements, resulting in positive client reviews for ease of use.

I created graphics for the web and a few for print, also Flash and GIF animations plus banner and tower ads for both marketing departments to support various marketing campaigns as requested. On occasion I updated the layout of an email template used regularly to send client information. I also acted as “best practices” web consultant for both bank and card services marketing departments.

Skills Required: HTML, CSS, Dreamweaver, Flash, Photoshop, Illustrator, Javascript, JQuery, classic ASP, ASP .Net using Visual Studio, web page design and layout.

USA Mobility, Plano, Texas

1999 to 2008

Web Designer

NOTE: I started my web career with WebLink Wireless. Our web design team took the WLW web site in-house to give it a much better look and feel, and brought the underlying code up to the web standards common in the early 2000s. Corporate mergers between WebLink Wireless, Metrocall Inc. and Arch Wireless resulted in a new company, USA Mobility.

Updated multiple internal and one primary external web site (www.usamobility.com), updated or created graphics as needed, created Flash animations, created and validated web forms for email submission. Provided support for older PERL applications.

Skills required: HTML, Dreamweaver, Photoshop, Flash, Javascript, Illustrator, classic ASP, PERL, web page design and layout.

Nortel Networks, Dallas, Texas

1983 to 1999

Field Service Technician

Maintained and repaired proprietary super-mini computer systems and software that provided directory assistance services to Texas and the adjoining states for Southwestern Bell Telephone.

Skills required: Electronics knowledge, system troubleshooting, UNIX/AIX.

United States Air Force, Bellevue, Nebraska

1979 to 1983

Computer Technician

Provided mission support by maintaining national defense communications system computer system at the former SAC Headquarters. Honorably discharged.

Skills Required: Knowledge of D.C. circuits, high-reliability soldering, troubleshoot electronics to component level for computer systems and peripherals.
